PRIORITY DOCUMENT

SUBMITTED OR TRANSMITTED IN
COMPLIANCE WITH RULE 17.1(a) OR (b)

GB 00/01713

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

Signed *AmBruegger*.

Warning

After an application for a patent has been filed, the Comptroller of the Patent Office will consider whether publication or communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977. You will be informed if it is necessary to prohibit or restrict your invention in this way. Furthermore, if you live in the United Kingdom, Section 23 of the Patents Act 1977 stops you from applying for a patent abroad without first getting written permission from the Patent Office unless an application has been filed at least 6 weeks beforehand in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction has been revoked.

Notes

- If you need help to fill in this form or you have any questions, please contact the Patent Office on 0645 500505.
- Write your answers in capital letters using black ink or you may type them.
- If there is not enough space for all the relevant details on any part of this form, please continue on a separate sheet of paper and write "see continuation sheet" in the relevant part(s). Any continuation sheet should be attached to this form.
- If you have answered 'Yes' Patents Form 7/77 will need to be filed.
- Once you have filled in the form you must remember to sign and date it.
- For details of the fee and ways to pay please contact the Patent Office.

Packet

This invention relates to packets, particularly but not exclusively cigarette packets such as those having a hinged lid.

5 Miniature devices are known for use in greetings cards for playing an electronically recorded audible message on actuation of a switch, usually on opening of the card. Typically the audible message is recorded on electronic memory means provided as part of an integrated circuit. Usually associated with the circuit is a digital to analogue converter and a miniature loudspeaker or
10 equivalent. It is also known to provide similar devices also incorporating a microphone and analogue to digital converter, thereby providing a facility to record a message for subsequent replay. Any device of this general kind, or otherwise capable of incorporation in or with a packet and of playing an audible message or sound on actuation of a switch or other actuatable means, is
15 hereinafter referred to as a "miniature audio device".

According to one aspect of the present invention a packet includes a miniature audio device, and means for actuating the device on opening the packet or otherwise gaining access to the or part of the contents. The device may be internal in the sense that it is contained within the packet (although not necessarily in the same compartment as the main packet contents), or external, e.g. affixed to an outer wall of the packet. The packet contents may be a group of articles removable individually, e.g. cigarettes. Accordingly, another aspect of the invention provides a cigarette packet including a miniature audio device.

In either aspect of the invention the switch may be actuated manually, or
25 at least semi-automatically, on opening of the packet. Thus, a tab or tape may be connected to the switch and in the case of hinged lid packets connected also to the lid such that on initial or preferably each opening of the lid, the tab or tape actuates the switch. Alternatively, a tab or tape connected to the switch may be exposed on first opening of a packet and may be moved or movable manually
30 on first or subsequent access to the packet contents. For example, pulling on a tape to actuate the switch may be associated with a lifting strip which displaces a first cigarette after opening of the packet so as to allow easier grasping by a

smoker. Such lifting strips could be used with hinged lid cigarette packs or with so-called soft packs. It may not be necessary for there to be a physical connection between the switch and part of the packet or its contents to cause actuation of the device, e.g. the switch could be a proximity switch and respond 5 to movement or a photodetector responding to light when the packet is opened.

The device may be actuated on the removal of a predetermined one or part of the packet contents, whereby a message related to the remaining quantity of contents of the packet may be played. For example, a message could be played reminding a consumer to obtain further supplies when only one or a few 10 articles remain in the packet. In such case the switch could be connected so as to be actuated by removal or movement of the last or one of the last articles. An example of one product where such an arrangement would be useful is a packet containing sheets of label.

The type of message could and normally would depend on the packet 15 contents. Where the contents are cigarettes, messages containing speech and/or music associated in the consumer's mind with a particular brand or manufacturer could be played, or health or other warnings could be given. Where the message is spoken, this could be in any or several languages.

The term "packet" is used herein broadly e.g. to include bags or other 20 containers.

The invention will be further described, by way of example only, with reference to the accompanying diagrammatic drawings, in which:

Figure 1 is a side view of a hinged lid cigarette packet, and

Figure 2 is a sectional view on the line II-II in Figure 1.

A hinged lid packet 10 has a body portion 12 and a lid portion 14 25 connected to the body portion along a hinge line 16. The body 12 contains a main compartment 18 having a base 20 for containing a group of cigarettes (not shown) usually wrapped in protective foil. The base 20 serves to separate the main compartment 18 from a sub-compartment 22 which contains a miniature audio device 24 having a movable switch 26. A tape 28 constructed from relatively stiff plastics material extends from the switch 26 through a small slot 30 in the base 20 and along a side face of the main compartment 18 to a connection

30 on the corresponding side face of the lid 14. The connection 30 may be glued but the connection and/or tape preferably allows pivotal or bending movement of the tape when the lid 14 is opened. The switch 26 may incorporate a resilient connection to the device 24 so as to retract the tape 28 on closing of the lid, in 5 which case the tape could be replaced by a thread; alternatively, the tape may be sufficiently stiff to close the switch on closing of the lid.

It will be appreciated that on opening of the lid 14 by hinging about the line 16 the tape 28 is pulled to actuate the switch 26. The device 24 may deliver an audible message or other sound while the switch 26 is in its actuated position 10 (i.e. while the lid 14 is open) or may simply deliver a message or sound of predetermined length on each actuation.

The tape 28 could be replaced with a tape passing adjacent the rear face of the packet 10, as indicated at 28A in Figure 2. It will be appreciated that the location of the switch 26 on the device 24 needs to correspond with the position 15 of the tape 28 or 28A.

A device similar to the device 24 could be located other than in a separate compartment within the packet, although it is preferred that the device is separated from the packet contents so as to avoid possible tainting of the cigarettes. The device 24 could be mounted externally of the packet, e.g. on the 20 rear face, particularly where the device is of flat construction.

Claims

1. A packet including a miniature audio device, and means for actuating the device on opening the packet or otherwise gaining access to the or 5 part of the contents.

2. A packet as claimed in claim 1, wherein the contents comprise a group of articles removable individually.

10 3. A packet as claimed in claim 1 or claim 2, wherein the articles are cigarettes.

4. A cigarette packet including a miniature audio device.

15 5. A packet as claimed in any preceding claim, wherein the device incorporates a switch which is actuated on opening of the packet.

20 6. A packet as claimed in claim 5, wherein the packet has an openable lid and the switch is connected to the lid by longitudinally-extending connecting means.

7. A packet as claimed in any preceding claim, wherein the switch or other actuatable means is connected to a tab which is adapted to be moved to gain access to the packet contents.

25 8. A packet as claimed in claim 7, wherein movement of the tab is arranged to expose or lift at least part or one of the packet contents.

30 9. A packet as claimed in any preceding claim, wherein the switch or other actuatable means is actuated other than by physical connection between it and part of the packet or its contents.

10. A packet as claimed in claim 9, wherein the switch or other actuable means is a proximity switch.

5 11. A packet as claimed in claim 9 or claim 10, wherein the switch or other actuable means includes photoelectric means.

12. A packet as claimed in any preceding claim, wherein the device is arranged such that its switch is actuated by removal of at least one or part of the packet contents.

10

13. A device as claimed in claim 12, wherein the switch or other actuable means is actuated on removal of a predetermined one or part of the packet contents, whereby a message related to the quantity of the contents remaining in the packet may be played.

15

14. A packet as claimed in any preceding claim, wherein the device is arranged to play a message related to the nature of the packet contents or their manufacturer.

20

15. A packet as claimed in claim 14, wherein the message contains speech and/or musical content.

16. A packet as claimed in any preceding claim, wherein the device is capable of recording and subsequently replaying a message.

25

17. A packet as claimed in any preceding claim, wherein the device is separated from the packet contents by at least one wall.

30

18. A packet as claimed in claim 17, wherein the packet contents and said device are contained in separate compartments.

19. A packet substantially as herein described with particular reference to the accompanying drawings.

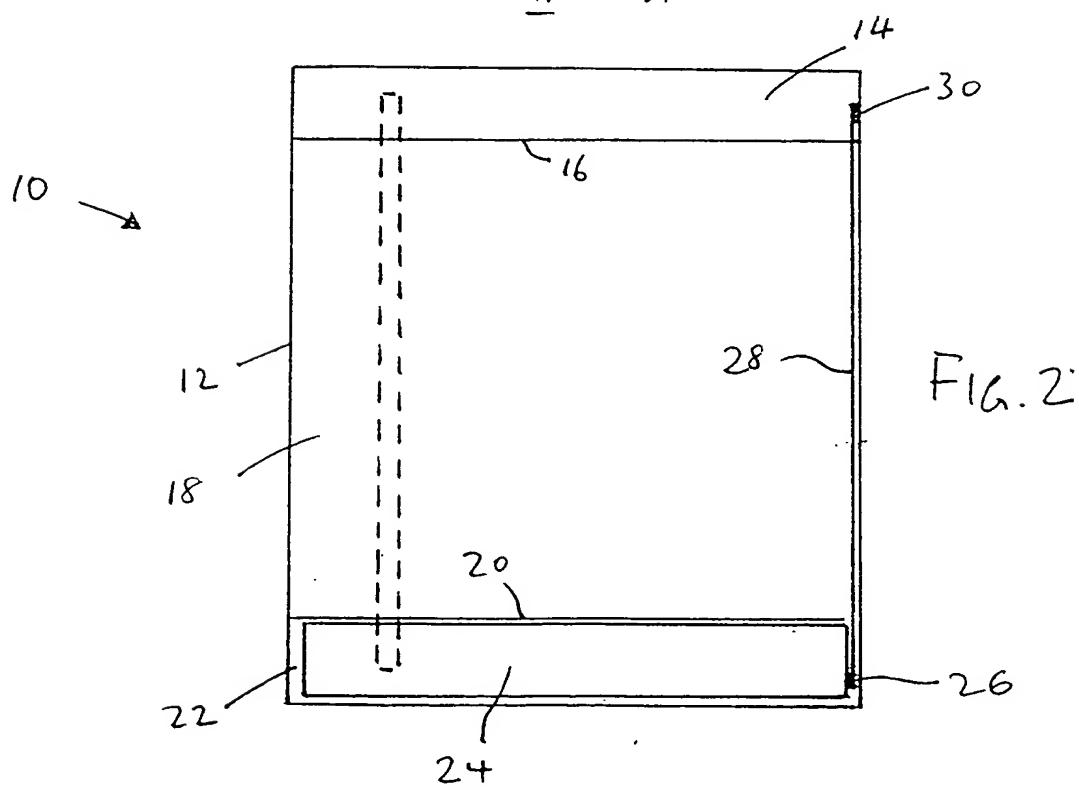

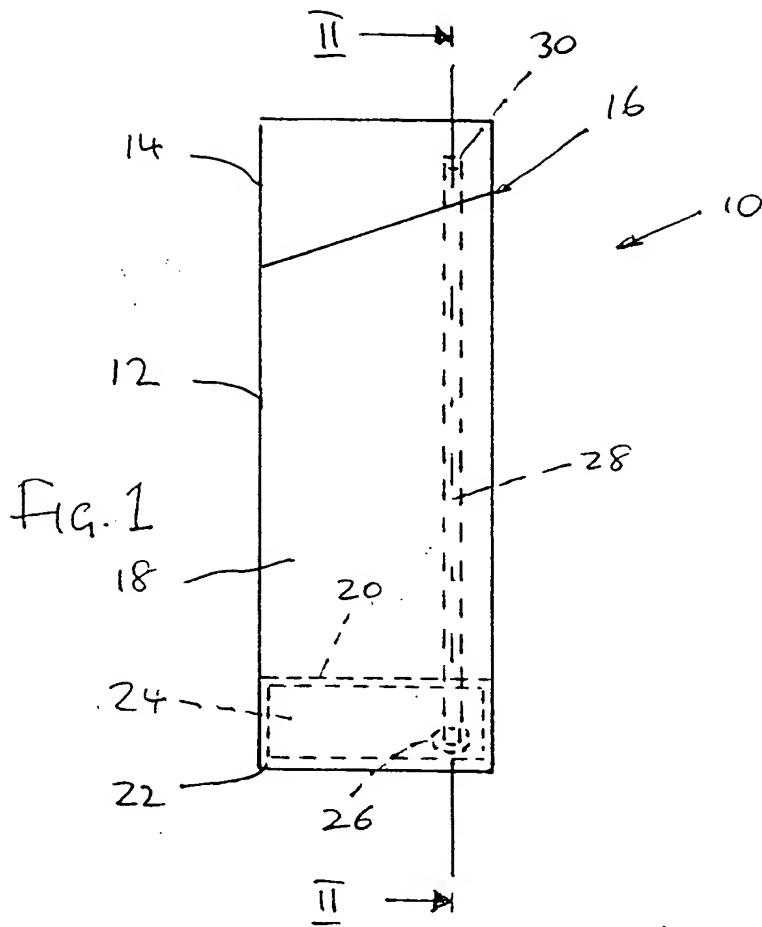

5

10

Abstract of the Invention

A packet incorporates a miniature audio device capable of playing an electronically recorded audible message on actuation of a switch, particularly on opening of the packet or otherwise gaining access to the packet contents. The device could play a pre-recorded message containing speech and/or music, and/or could replay a message recorded by the consumer. The packet may contain cigarettes or other individual articles, the device preferably being located within a separate compartment contained within the packet.
